

Bellic's Room

Life is very difficult, and more difficult for a perverse mathematician immersed in crime. Well ... What does it mean today to be a mathematician? For Christopher Bellic is the hope he can escape a past as a *nerd* in school, but you must deal with the disappearance of a number of busybodies with an intellect more developed than yours. As his companions ascend in the accounting firm, he deals drugs in a neighborhood crime. Why? Because nobody appreciates his mathematical instinct? Is it because he didn't study enough because of the humiliation of his old teammates, or because he have not a career? ... He is accumulating debts and is dragged into a criminal underworld by a series of corrupt, thieves and murderers. He discovers that the reality is very deferential to that dream. He must act, decides to create a room with a perfectly designed mechanism in an old slaughterhouse on the outskirts of the city. Bellic falsify a somewhat mysterious invitations addressed to Juli, Charlott and Roman, where it would be printed the following words: **It's going to hold a meeting for most famous mathematicians of the city and you're invited. We're going to show you the biggest problem ever solved. Will you be ready?** Because misspellings you could see that it was not an official event but a trap. But no one noticed it. When the invitations arrived at their destination, he made sure that none of them misses the event. The plan consisted of meeting the three of them inside the

room, Christopher would pretend to be a guest but mysteriously it would disappear without a trace, closing the door behind the room. Then they would be enclosed within four concrete indestructible walls. From his mobile phone, he would send high level math problems to a small computer situated in one corner. At first it would be easy, but it would advance the time and they would be complicating, so much fail, crucial failure for them, they will begin to wane the wall to crush them. There is no escape, no one knows your plan, only you, you must help them, unlocking codes, but ... Will you can?
